

Hybrid identity security posture management.

Saporo delivers advanced hybrid Identity Security Posture Management, combining posture analysis with graph-based attack path mapping to reduce systemic identity risk across Active Directory, ADCS, SMB Shares, Azure, Entra ID, M365, and more.

80%

of cyberattacks leveraged identity

94%

of critical assets can easily be compromised

40%

of shadow admins can be exploited in 1 step

Navigating identity chaos with Saporo

Saporo turns identity chaos into clarity. By modeling access and attack paths across AD, Entra ID, M365, Okta, and AWS, Saporo helps you cut through noise and focus on what really matters: eliminating systemic risk at scale.

Cut, prioritize and monitor.

- **Cut your identity attack surface.** Prevent attackers from easily escalating privileges or reaching critical assets.
- **Prioritize what matters most.** Not every misconfiguration is equally dangerous — Saporo shows you which ones open real attack paths.
- **Monitor for change.** Identity environments shift daily — Saporo keeps watch so you don't fall behind.

Best Cyber Security

Resist identity driven attacks.

Considerably reduce your identity attack surface.

Prevent attackers from easily accessing critical assets. Cut millions of paths from regular users and objects to privileged assets.

| Item ID | Item Name | Item Type | Item Path | Item Status | Item Action |
|---------|---------------|-----------|-----------|-------------|-------------|
| Item 1 | Access Denied | Access | ... | ... | ... |
| Item 2 | Access Denied | Access | ... | ... | ... |
| Item 3 | Access Denied | Access | ... | ... | ... |
| Item 4 | Access Denied | Access | ... | ... | ... |
| Item 5 | Access Denied | Access | ... | ... | ... |
| Item 6 | Access Denied | Access | ... | ... | ... |
| Item 7 | Access Denied | Access | ... | ... | ... |
| Item 8 | Access Denied | Access | ... | ... | ... |
| Item 9 | Access Denied | Access | ... | ... | ... |
| Item 10 | Access Denied | Access | ... | ... | ... |

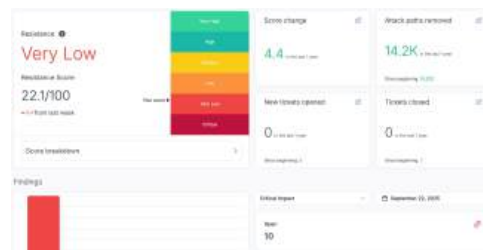

Prioritize resources on what matters most.

Focus resources on the biggest risks. Saporo correlates misconfigurations from frameworks such as **ANSSI, MITRE and CIS** with impact to prioritize the findings that have the biggest impact.

Continuously monitor changes to stay secure.

Track changes that create risks as they happen. Routine system updates can critically affect your security posture.

Easy and flexible installation

Scalable and agentless, Saporo is typically installed and ready in one hour. Our solution only requires read access. Saporo can be fully installed **on-premises or in the cloud.**
